Art Unit: 3731

Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lawton (DE 3219260). Lawton discloses a scissors comprising two branches each of which has a cutting section 13 and handle section and a metal member 12 which has a thickness within the claimed range (at least near the cutting edge where the thickness is small). Lawton fails to describe the metal member 12 as a "foil". However, it would have been obvious that it is a foil since it is very thin. As to claims 23 and 24, Lawton fails to disclose teeth at the cutting edges. However, it is old and well known in this art to include teeth or serrations in the cutting edges of blade in order to obtain the advantage of improving the cutting action. It would have been obvious to make the cutting edges of Lawton serrated so that it too would have this advantage. As to claim 15, for example, Lawton fails to disclose the specific attachment means between the metal foil and branch. However, it is old and well known in this art to use the claimed attachment means in order to obtain the advantage of providing a secure and strong connection between the parts. It would have been obvious to use the claimed attachment means in the Lawton device so that it too would have this advantage. The above well known in the art statement is taken to be admitted prior art because applicant failed to traverse the examiner's assertion (M.P.E.P. 2144.03).

Applicant's arguments filed March 22, 2007 have been fully considered but they are not persuasive. Once the Lawton metal bead 12 is ground into its final shape with a cutting edge, it is a thin sheet of metal. The definition of "foil" is a thin sheet of metal. The patentability of a product does not depend on its method of production (MPEP 2113). Thus, the argument that the scissors of Lawton are produced by an entirely different process that is used to produce the scissors of the invention is not persuasive.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
